

Envibat WESP installation Incineration of chemical waste Sweden

Treatment of gases from chemical waste incinerator

Envibat has delivered a WESP as the final stage of the air pollution control system, ensuring the emission limit of 10 mg/Nm³ is met with a margin to spare.

Process data

Gas flow, normal	26 000 Nm ³ /h
Gas temperature	70 °C
Emission limit	10 mg/Nm ³

Customer experience

"Increasingly stringent emission limits for dusts made it necessary to either replace or extend our existing WESP installation. We chose to install a WESP from Envibat. Envibat has fulfilled all of our expectations and wishes. The emissions are well below the specified limits, and the planning, delivery and installation of the equipment all went according to plan and to our full satisfaction."
